

Urban Growth Area Expansion

Urban Growth Area Utility Considerations

Population growth is only one of several factors that must be considered in determining an appropriate UGB. Another key factor is the service capacity of the water and sewer utilities. Water service is generally not a major constraint to locating development within different areas of the UGA. Sewer service on the other hand can present some difficulties.

The main sewer trunk line serving properties generally east of Road 60 and north of I-182 was designed to accommodate development within the UGA established by Franklin County in 1992 and re-established in 2004. This trunk line can serve approximately 1,300 more residential housing units. The three major developments (Loviisa Farms, Northwest Commons & First Place) yet to be built in this area will consume the reserved capacity in the trunk line. There is little capacity available for the trunk line to serve property beyond the existing UGB at Powerline Road. The sewer service capability beyond the current UGB east of Road 60 is further complicated by the topography of the area. The ground elevation north of the present UGB breaks and falls off sharply to the east. Providing sewer service in this area would be problematic. A major lift station would be needed. However, lifting waste up to a trunk line with no capacity is not an option. The ground elevation to the east is more conductive to a gravity line but this would entail constructing a trunk line at least three miles to the east and then south and connecting to lines that have been dedicated for industrial development.

In 2001 the City of Pasco installed a significant sewer trunk line west through the southern portion of West Pasco to the intersection of Court Street and the I-182 bridge. This line was designed with excess capacity to serve properties west and north of Road 100 (Broadmoor Blvd). The trunk line extending north from Argent Road in the vicinity of Road 72 was also designed with additional capacity to serve properties to the north of Sandifur Parkway west of Road 68.

The city's sewer collect system was designed and constructed for the current UGB. The Area proposed for expansion into the existing UGB (west of Broadmoor Blvd.) would need a separate collection and treatment system prior to build out of the new area. Since it will take time to use the full capacity of the existing treatment system, the existing system will provide service until the new facilities are needed for the new area. Interim improvements would require one or more pumping stations and associated pipelines that would most likely be abandoned with the new system is completed. The sewer connection fees would need to reflect the costs to build the new system at some future date. All sewer lines will be extended concurrent with development as required by PMC 12.36.

The city's domestic water has more flexibility for expansion with three water reservoirs close to the northern UGB boundary. An expansion of the existing water filtration plant or a satellite treatment system will be required in the near future for the existing UGB. Considering the location of the existing water treatment plant, a satellite treatment system would be feasible in a location near the Columbia River at the far west end of the existing UGB. The city currently has a new pumping facility just west of Road 111 in the Columbia River. When needed the satellite plant will be built near this

intake facility. The existing reservoir capacities will be used until such time as a new reservoir would be required for the new area. The water connection fees would need to reflect the costs to build the facilities for the new area. All water lines will be extended concurrent with development as required by PMC 12.36.

The city's Irrigation system and Franklin County Irrigation District could potentially service outdoor irrigation requirements for the new area. The domestic and irrigation systems should be separate.

The new growth area should provide the water for both domestic and irrigation needs, where practical. Much of the area is in agricultural use, which means water is available for growth. A review of the water rights in the area would need to done to establish if there are any restrictions on these water rights.

A third contributing factor to selecting an UGA expansion is that of transportation corridors. The comprehensive Plan has long called for the extension of Road 100 (Broadmoor Blvd.) to the north. Franklin County has included this extension in its 6 year street plan and is currently designing the extension. The completion of the connection to Dent Road north and the planned connection to Dent Road to the west will significantly increase traffic on Broadmoor Boulevard north of Sandifur Parkway. This increase in capacity will generate interest in development near and north of the Road 100/I-182 Interchange. The completion of signalization and slip ramp construction on the Road 100/I-182 interchange in the summer of 2007 will increase the capacity and safety of the interchange. This will then improve the capacity of the area north of Sandifur Parkway along Broadmoor Boulevard to accommodate urban growth.

Designation of the Urban Growth Area

Based on the recent OFM growth projection, sewer service capacity and planned street improvements the community can more appropriately accommodate urban growth west of Road 68. By generally extending the UGB a quarter mile north of the city limits between Road 68 and Broadmoor Boulevard and extending a half an mile to a mile north west of Broadmoor Boulevard approximately 1,128 acres land could be added to the UGA of Pasco. Of the 1,128 acres approximately 880 would be available for development. The extension of Broadmoor Boulevard is more or less the center of the described area. Map # 2 provides an illustration of the UGB expansion area.

Appendix IV – Capital Facilities Inventory

The following data provides a listing of all major capital facilities owned maintained and or operated by the City of Pasco:

Description And Location	Year Built	Value
Buildings and Struc	tures

Appendix VI -Bikeway Plan

Introduction

Goals and objectives create the framework for a plan. A goal is a broad statement that gives the community a sense of direction. Goals typically do not change over time. Objectives are a more precise statement that, when accomplished, help achieve a goal. There are multiple options for achieving goals and therefore objectives may change based on new information, community value shifts, technology, or other ideas. Modification of objectives is a continuous process.

Overall Bikeway Goal

Overall Goal: Create and maintain a high-quality bikeway network that is safe, direct, comfortable, and aesthetically pleasing, which encourages non-motorized over automobile travel, and which allows cyclist access to every destination accessible to automobiles. A well-designed bikeway will encourage a healthier lifestyle and reduce negative impacts on the environment. Bicycles should be seen as legal transportation devices and be afforded the same consideration as motorized vehicles.

Policies and Objectives

The overall Goal can be broken down into several Policies and Objectives that elaborate on and help quantify the goal statement. The plan's objectives include the following:

1) **Policy:** Connectivity/Access—Bicyclists should have access to every City destination accessible by motorized vehicles, where practical.

Objectives

- a) Require bicycle lanes, paths, or trails and bicycle access points in new development design.
- b) Design bike paths for the most direct routes possible.
- c) Remove/mitigate major barriers such as freeways and railroad crossings by including over/underpass facilities. Crossing points to be at right angles and to be as short as possible.

- d) Connect "Missing Links" for bike path continuity.
- e) Loop and interconnect paths, or trails to provide a variety of trail lengths and destinations including small and large loops for a broad range of experiences and ability levels
- f) Provide safe bicycle access to and parking facilities for all major commercial destinations, where practical.
- g) Provide safe bicycle access to and parking facilities for all major civic destinations, (e.g., library, post office).
- h) Provide safe bicycle routes to all schools.
- 2) *Policy: Safety/Security*—Bicyclists should have safe access to destinations citywide, where practical.

Objectives:

- a) Design bicycle routes and paths to minimize the conflicts between motorists and bicyclists by increasing the separation of cyclists from motorized vehicles as hazards increase as funding permits.
- b) Design intersections with bicycle-friendly facilities such as bicycle-first signaling as funding permits.
- c) Include secure bicycle lock-up facilities at all destinations as funding permits.
- d) Design landscaping to be open and "visually secure," as funding permits.
- e) Install clear Right-of Way indicators for automobiles and bicyclists as funding permits.
- f) Utilize "Traffic Calming" measures where appropriate.
- g) Clearly mark bike paths and lanes for safety as funding permits.
- h) Consider installation of lighting along bike paths and trails as funding permits.
- 3) *Policy: Comfort/Convenience*—Bikeways shall be designed to encourage nonmotorized travel citywide.

Objectives:

- a) Plant shade trees along bicycle paths for relief from summer heat. Trees should be selected that do not produce a destructive root pattern for paths and trails.
- b) Include rest areas with water, air, and toilet facilities at convenient intervals along bicycle routes.
- c) Design bicycle lanes, paths, or trails for "flow," with as few stops as possible.

- d) Mark trails for distance monitoring.
- *4) Policy: Aesthetics* Bikeways shall be aesthetically pleasing so as to encourage non-motorized travel citywide.

Objectives:

- a) Plan bike paths and trails to provide visual and physical access to natural areas and to the river.
- b) Landscape bicycle lanes, paths, or trails to be interesting and attractive to the user.
- c) Take soil conditions, surface drainage and other physical limitations that may impact or cause over-use into account when designing bike paths or trails.
- 5) *Policy: Incentives/Promotion*—Encourage non-motorized travel
- a) Consider utilizing urban planning approaches that promote physical activity wherever possible (As per Chapter 36.70A.070(1) RCW).
- b) Make bikeway maps easily available (brochures and internet).
- c) Continue to provide Safety guides/education.
- 6) Policy: Maintenance—Establish bike path maintenance policies and schedules.
- a) Maintain roadways and bikeways to a relatively hazard-free standard.
- i) Sweep pavement and paved shoulders with sufficient care.
- ii) Patch potholes in an expeditious manner.
- iii) Patch surfaces as smoothly as possible and require other agencies or private companies to do likewise whenever a road or trail is excavated.
- iv) Make sure pavement overlay projects feather the new surface into the existing one or otherwise do not create new linear joints.
- v) Replace such hazards as dangerous grates or utility covers as the opportunity arises.
- vi) Implement vegetation prevention programs as allowable and practical.
- vii) Routinely cut back all encroaching vegetation on trails or popular bike routes.
- a) Encourage bicyclists to report maintenance problems and other hazards.
- i) Develop a bicycle trail/path improvement form and distribute copies throughout the bicycling community.
- ii) Make sure returned forms are acted on in a timely manner.
- b) Design and build new roadways and bikeways in such a manner as to reduce the potential for accumulation of debris.
- i) Use edge treatments, shoulder surfaces and access controls that reduce the potential for accumulation of debris.
- ii) Use materials and construction techniques that increase the longevity of new trail surfaces.
- c) Include maintenance costs and maintenance procedures in all bicycle facility projects.

- i) Include reasonable estimates for the maintenance costs in the project budget.
- ii) Establish clear maintenance responsibilities in advance of construction.

Bike Routes

Bike routes for the City of Pasco are identified in the attached Bike Route Map

Appendix VII – Traffic Volumes
